

MTX-A88 Typical House System

Typical Use

Houses, Offices, Meeting rooms, restaurants & bars or anywhere distributed audio with local control is required.

Description

The MTX-A88 is centrally located and the audio sources are connected directly. In the diagram this consists of four radio tuners along with a satellite receiver and HDD Jukebox. Each room has its own control panel and local amplifier allowing selection of any input and control over the volume.

The lounge uses the line level output of the panel to feed an independent Hi-Fi system and this system has a return feed to the MTX-A88 allowing the music to be shared.

The dining rooms line level output feeds via the room TV.

Control and installation

Connection between the matrix and a remote room consists of a single Cat5 cable for power, control and audio. Amplifiers need to be locally powered.

The configuration software allows selection of which inputs can be accessed by each panel and also to set upper and lower volume thresholds. These can be stored into 8 presets to allow the available inputs and volume range to be changed to suit different conditions or times of the day,

Accessories

The MTX-A88 is supplied complete with a 12V power supply and a range of remote panels is available including a 50mm modular version.

Separate amplifiers along with desk modules and wall panels are available from our range.

Kit List

For the system as illustrated, excluding the source equipment, Lounge Hi-Fi, dining room TV and all loudspeakers, you will need:-

1 x MTX-A88 matrix	£ 580.00
